Auto Parts: Spark Plugs and Glow Plugs | ACDelco

The term heat range refers to the speed with which a plug can transfer heat from the combustion chamber to the engine head. Whether the plug is to be installed in a boat, lawnmower or race car, it has been found the optimum combustion chamber temperature for gasoline engines is between 500°C-850°C. Within that range it is cool enough to avoid pre-ignition and plug tip overheating (which can cause engine damage), while still hot enough to burn off combustion deposits that cause fouling.

Features & Benefits. Has a copper-core center electrode that helps provide improved heat transfer from the tip, giving you the reliability you're looking for while providing better performance in most operating conditions*. Precisely engineered and manufactured to provide everyday reliability and efficient performance. The copper-core center electrode allows for a longer insulator tip length for a given heat range, which helps prevent low-speed carbon fouling.
