Continuous delivery is a software engineering approach in which teams produce software in short cycles, ensuring that the software can be reliably released at any time and, when releasing the software, doing so manually. It aims at building, testing, and releasing software with greater speed and frequency. The approach helps reduce the cost, time, and risk of delivering changes by allowing for more incremental updates to applications in production. A straightforward and repeatable deployment pro

With the increasing popularity of agile development a new approach to software releases known as Continuous delivery is starting to influence how software transitions from development to a release. One goal of Continuous Delivery and DevOps is to release more reliable applications faster and more frequently. The movement of the application from a “build” through different environments to production as a “release” is part of the Continuous Delivery pipeline.
