A lot has changed in the networking area since I took a Computer Science course about the topic during my undergraduate days in the late '80s - wireless communications, Internet telephony. The book covers the five layer TCP/IP protocol suite and provides a basic understanding about each layer using plenty of diagrams complemented with supporting text.

TCP/IP was designed to allow networks running on different protocols to have an intermediary protocol that would allow them to communicate. So as long as your network supported TCP/IP, you could communicate with all of the other networks running TCP/IP. TCP/IP quickly became the standard protocol and allowed networks to communicate with each other.
