Earthquakes in Washington today: latest quakes past 30 ...

Earthquakes cause damage by moving and shaking the ground, sometimes for several minutes. The shaking can damage or destroy buildings and other infrastructure. Most damage and loss of life in earthquakes is a result of ground shaking. The shaking can also cause landslides, surface ruptures, ground cracks, liquefaction, tsunamis, and seiches ...

Earthquakes and Faults | WA - DNR

Earthquakes are caused by shifts in the outer layers of Earth—a region called the lithosphere. The solid crust and top, stiff layer of the mantle make up a region called the lithosphere. The lithosphere isn't a continuous piece that wraps around the whole Earth like an eggshell.

Earthquakes - USGS

The nature of earthquakes Causes of earthquakes. Earth's major earthquakes occur mainly in belts coinciding with the margins of tectonic plates. This has long been apparent from early catalogs of felt earthquakes and is even more readily discernible in modern seismicity maps, which show instrumentally determined epicentres. The most important earthquake belt is the Circum-Pacific Belt, which ...

Earthquakes can cause fires, tsunamis, landslides or avalanches. While they can happen anywhere without warning, areas at higher risk for earthquakes include Alaska, California, Hawaii, Oregon, Puerto Rico, Washington and the entire Mississippi River Valley. Prepare Before an Earthquake

Earthquakes | Ready.gov

Earthquakes are recorded by instruments called seismographs. The recording they make is called a seismogram. The seismograph has a base that sets firmly in the ground, and a heavy weight that hangs free. When an earthquake causes the ground to shake, the base of the seismograph shakes too, but the hanging weight does not.

List of earthquakes in Washington (state) - Wikipedia

Though earthquakes have terrorized people since ancient times, it's only been in the past 100 years that scientists have come to understand what causes them, and to develop technology to detect their origin and measure their magnitude. In addition, engineers and architects have worked to make buildings more resistant to earthquake shocks.
