An asphalt hot box is insulated and heated to keep the asphalt mix hot. This allows asphalt contractors and large property owner to work with the asphalt in its workable form. Without an asphalt hot box, the asphalt would cool too quickly and turn to a solid form. Hot asphalt is a long lasting durable product, made from rock, sand, tar and bitumen.

Widely used for its convenience, hot mix asphalt is the most common used flexible pavement in the US. It is also known as blacktop or bitumen, and sometimes just hot mix. Hot mix pavements are classified mainly as dense-graded mixes, stone matrix mixes, and open-graded hot mix asphalt. There are also other types of asphalt but are limited to maintenance and rehabilitation works.

### **Three Hot Mix Asphalt Types**

Hot-mix asphalts are a mixture of suitable aggregate coated with asphalt cement. The term "hot-mix" comes from the process of heating the aggregate and asphalt before mixing to remove moisture from the aggregate and to obtain sufficient fluidity of the asphalt cement for proper mixing and work-ability.
