Investigation 19 World Population Growth

To compare to some of the epidemics of the past, the percentage of the world's population killed between 1993 and 2002 decreased from 0.30 percent of the world's population to 0.24 percent. Thus, it appears that the influence of infectious disease on human population growth is becoming less significant.

World Population Map Activity Guide

The global population growth rate peaked long ago. The chart shows that global population growth reached a peak in 1962 and 1963 with an annual growth rate of 2.2%; but since then, world population growth has halved. For the last half-century we have lived in a world in which the population growth rate has been declining.

World Population Growth - Our World in Data

The UN projects that the global population increases from a population of 7.7 billion in 2019 to 11.2 billion by the end of the century. By that time, the UN projects, fast global population growth will come to an end. Beneath the global level, there are of course, big differences between different world regions and countries.
