Pipesim 2015

PIPESIM 2015 enables users to specify both the total gas lift injection rate and the injection pressure to calculate a tuning factor to ensure valve performance equations match observed data. This tuning factor can be applied to the valve system for more accurate modeling. Additional improvements include

The PIPESIM simulator offers the industry's most comprehensive steady-state flow assurance workflows for front-end system design and production operations. The flow assurance capabilities of the simulator enable engineers to ensure safe and effective fluid transport—from sizing of facilities, pipelines, and lift systems, to ensuring effective liquids and solids management, to well and pipeline integrity.
