Qualitative Analysis of Anions. In this lab, we are to analyze the different processes that will be used in laboratory to help us gain experience in identifying different anions and how we can become familiar with different anions by observations of the reactions and products. In this lab we separated precipitates and by doing this we were able to confirm the reactions that create a precipitate and we used this to identify which anions can be reacted in which a gas formation and a color ...

The part that the acid contributes is called anion in the formation of a salt and the part that the base contributes is called cation. The preliminary examination gives important clues about the presence of some anions or cations. The systematic analysis of anions is an integral part of salt analysis (or qualitative inorganic analysis).
