Select Trusses entire staff have made a commitment to producing the highest quality building components in the Midwest!

## **Products | Select Trusses & Lumber, Inc.**

Floor Trusses Select Trusses & Lumber. Floor trusses are able to span farther than dimensional lumber and even I-joists. This reduces the need for interior bearing and provides space for HVAC, plumbing, and electrical systems within the floor panels. Our custom designed floor truss systems reduce the amount of "bounce" that can be found in conventionally framed floor joist systems.

## **Floor Trusses | Select Trusses & Lumber, Inc.**

Roof trusses, like floor trusses, are a framework of small members (usually 2x4s) that are connected so that they act like a single large member. They are always engineered by the manufacturer. Engineered roof trusses can span much greater distances than the stick-framed rafter-and-tie system.

## **Trusses | Midwest Manufacturing**

Floor trusses can span farther between bearing points than I-joists, allowing for larger open rooms. This also reduces the need and cost for extra bearing posts, beams, and footings. Floor trusses have built-in openings, which can be used to install HVAC ductwork, plumbing lines, and electrical wiring.

## **Floor Truss, Roof Truss I-Joist and LVL - Appalachian Truss**

Using prefabricated building components—roof trusses and floor trusses specifically engineered for the job—takes the guesswork out of the house framing equation. It also lets you build faster and more efficiently than onsite stick building, reduces material waste and wasted time, and ultimately saves you money.

## **Roof Trusses - Structural Truss Systems**

Time and Weather Risks: Truss installation takes about a day on most 2,500 square foot homes. The trusses get installed, and the roof sheathing goes on, protecting the rest of the structure from weather. And the roof is ready for the installation of shingles. On the same home, rafters might take a week, depending on the size of the crew.
