To make the saturated solution, add 357 grams of sodium chloride to 1 liter of water, and mix thoroughly. The final solution is saturated. Advertisement. Determine the solubility of sodium chloride. The solubility of sodium chloride tells the chemist the amount of sodium chloride that can be easily dissolved in water.

How Do I Make a Saturated Sodium Chloride Solution?

When the solution equilibrium point is reached and no more solute will dissolve, the solution is said to be saturated. A saturated solution is a solution that contains the maximum amount of solute that is capable of being dissolved. At 20°C, the maximum amount of NaCl that will dissolve in 100. g of water is 36.0 g.

Saturated and Unsaturated Solutions | Chemistry for Non-Majors

During this process the saturated solution begins to absorb water from the air. This dilutes the solution at the surface. The less dense surface solution is gravitationally stable and does not mix with the bulk of saturated solution, so the RH drifts upwards from the theoretical value for the saturated solution towards 100%.
