It was Charles Darwin who speculated that our origins were African, in the *Descent of Man*, published in 1871. The theory fell out of fashion for a long time. Forty years ago the notion that our species emerged out of Africa was fanciful. Today, Darwin is being vindicated.

The Origin of Our Species: Stringer, Chris: 9781846141409 ...

Advances in genetic analysis have revealed the first glimmerings of an older origin for *H. sapiens*, with the discovery that we and our sister species, the Neanderthals, shared a last common ancestor about half a million years ago. Such developments have led some to question the classification of a diverse array of early fossils from across Africa.

On the Origin of Species (or, more completely, On the Origin of Species by Means of Natural Selection, or the Preservation of Favoured Races in the Struggle for Life), published on 24 November 1859, is a work of scientific literature by Charles Darwin which is considered to be the foundation of evolutionary biology.

On the Origin of Species - Wikipedia

On the Origin of Species. England became quieter and more prosperous in the 1850s, and by mid-decade the professionals were taking over, instituting exams and establishing a meritocracy. The changing social composition of science—typified by the rise of the freethinking biologist Thomas Henry Huxley—promised a better reception for Darwin.

Charles Darwin - On the Origin of Species | Britannica

All the evidence points to a multiple 'out of Africa' origin for the human species and that there were several spreads into what are now Europe and Asia before Homo sapiens became dominant. The work also illustrates the route taken by early modern humans from Asia into the North American continent.

The Origin of Our Species: Amazon.co.uk: Stringer, Chris ...

Description Chris Stringer's bestselling The Origin of our Species tackles the big questions in the ongoing debate about the beginnings of human life on earth. Do all humans originate from Africa? How did we spread across the globe?

The Origin of Our Species : Chris Stringer : 9780141037202

In considering the Origin of Species, it is quite conceivable that a naturalist, reflecting on the mutual affinities of organic beings, on their embryological relations, their geographical distribution, geological succession, and other such facts, might come to the conclusion that each species had

On the Origin of Species

Stringer lays out the evidence that Homo Sapiens originated in Africa and that there were not just one population of Homo Sapiens but several different populations that coexisted with other species of Homo Sapiens (such as Homo erectus). Eventually, homo sapiens replaced all other human species.
