Web Based Application Development By

Web application development is the process and practice of developing web applications. There is a consensus that the processes involved are extensions of standard software engineering processes. Considering this, along with its unique characteristics, popular frameworks used include the spiral approach and business-oriented approach to application development, among other models that address the requirements for an iterative process. Just as with a traditional desktop application, web applicati

Web application development - Wikipedia

From a broad perspective, a web-based application is any application that uses a website as the front-end, allowing users to access the application from any device. This is in direct contrast to conventional software applications, which need to be manually downloaded by the user onto their device. The advantages of this software are providing users with greater flexibility in access, the ability to roll-out updates and patches via the cloud, and greater overall functionality.
